Issue No: 1

EQUIPMENT:

Equipment and systems covered by this Certificate are as follows:

D1xS* (sounder) comprises an Aluminium enclosure housing components to generate selectable tones. Up to three M20 threaded entries may be provided for installation of appropriately certified cable entry devices by the end user.

The D1xL* (loudspeaker) utilizes the same enclosures and houses components to amplify sound.

D1xC* (sounder beacon) is the same housing as the D1xS* except on one end the beacon assembly is mounted. The lamp is protected by a glass lens and a stainless steel wire guard. Additional electrical components associated with the operation of the 5 and 10 Joule beacon are installed within the housing and reflected by the nomenclature with "AC" or "DC" followed by the voltage

Please see Annex for additional information.

SPECIFIC CONDITIONS OF USE: YES as shown below: No repair to the flameproof joints are permitted.

DETAILS OF CERTIFICATE CHANGES (for issues 1 and above)

2021-12-01

Issue 1: Updated Sounder PCBA for all models; added new D1xL*, D1xS2 and D1xC2 models; extended ambient temperature range -55°C to +85°C and all models have been evaluated for Type of Protection "tb".

TYPE DESIGNATION

Loudspeaker Model Nomenclature:

D1xL1-R008-A I II III

I – Model Type D1xL1 – 15 Watt Loudspeaker D1xL2 – 25 Watt Loudspeaker

II – Input Type R008 – 8 Ohm R0016 – 16 Ohm V070 – 70V Line V100 – 100V Line AXIS – Power Over Ethernet

III – Unit Type -A – Standard Unit

Sounder Model Nomenclature:

D1xS1-AC230-A

I – Model Type D1xS1 – Sounder Low Power Mode D1xS2 – Sounder Medium or High Power Mode

II – Voltage

DC024 – 24Vdc AC230 – 230Vac

III. – Unit Type -A – Standard Unit -S – SIL Unit

ROUTINE EXAMINATIONS AND TESTS

D1xC* Units only:

Routine overpressure tests in accordance with IEC 60079-1:Edition 7 shall be conducted on a number of units (detailed below) in accordance with clause 16.6, at a pressure of 222 psi / 15.3 bar for a duration of not less than 10 seconds. There shall be no sign of damage, deformation or rupture that will invalidate the concept of protection. The cemented joint is not permitted to leak. If there are any non-compliant results, all remaining samples in the batch and future batches shall be tested at 1.5 times the reference pressure until confidence is established to reconsider batch testing.

- For a production batch up to 100, a sampling of 8 needs to be tested at 1.5 times the reference pressure with no failure.

- For a production batch from 101-1000, a sampling of 32 needs to be tested at 1.5 times the reference pressure with no failures.

- For a production batch from 1001 up to 10,000, a sampling of 80 needs to be tested at 1.5 times the reference pressure with no failures.

- Batches above 10,000 must be subdivided into smaller batches.
